

To show: $(\exists x (\neg Px)) \Rightarrow (\neg(\forall x Px))$	; 6 claim
proof	
Assume that $\exists x (\neg Px)$	; 8 open block with assumption
Pick a with $\neg Pa$	; 9 open local scope with new constant "a"
Assume that $\forall x Px$	; 10 open block with assumption
$\Rightarrow Pa$	; 11 by 10
contradiction $(\not\vdash)$	; 12 by (11, 9), "bottom-intro"
$\Rightarrow$ not $(\forall x Px)$	; 13 by "not-intro"
$\Rightarrow$ not $(\forall x Px)$	; 13 by "exists-elim"
$(\exists x (\neg Px))$ implies (not $(\forall x Px)$)	; 13 by "impl-intro"
